Benefits of Business Credit

Business Credit is credit that is obtained under a Business Name. With business credit the Business builds its own credit profile and credit score. With an established credit profile and score, the business will then qualify for credit.

This credit is in the business' name and based on the business' ability to pay, not the business owners. Since the business qualifies for the credit, in some cases there is no personal credit check required from the business owner.

There are a ton of benefits that business credit provides. For example: a credit profile can be built for a business that is completely separate from the business owner's personal credit profile. This gives business owners DOUBLE the borrowing power as they have both Personal and Business credit profiles built.
