

# The Foundation of the Universe

Susan Bernau

# Foundation

The universe is vast and marvelous  
A tapestry of matter, light and time  
But what is the foundation that sustains it  
The hidden force that makes it all sublime?

Some say it is the laws of physics  
That govern how the stars and planets move  
The constants and the equations that predict it  
The patterns and the symmetries that prove it's designed.
